

## Press release

### Detection of an intrusion into our Information System

*Acigné - September 8, 2023*

On Monday September 4, 2023, we detected an intrusion in our Information System.

Immediately, an internal unit was set, with the support of external cyber security experts.

After defining this as a major intrusion, this unit also highlighted a number of different types of data extractions.

As a protective measure, and in line with our action plan, we decided on Thursday, September 7, 2023, to cut off all our IT communications with the company's outside.

We have chosen not to respond to requests from the identified and known group of criminals responsible for this attack.

The company has filed a complaint and informed the relevant authorities.

To date, our activities continue.

All our employees are fully mobilized to answer to the need of our customers and of all our partners.

Frédéric Martin,

Chairman of M-extend
